## **DETAILED ACTION**

### ***Election/Restrictions***

Applicant's election without traverse of group I in Paper No. 4 is acknowledged.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6, 9-10, 12-14, 23-24, 26, and 28 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Varker et al., U.S. Patent 4,683,637 (see Figures 5-11 and col. 4-line 43 to col. 8-line 3) or Baerg et al., U.S. Patent 4,700,454 (see Figures 1-6 and col. 3-line 21 to col. 4-line 58) or Liu et al., U.S. Patent 5,712,173 (see Figures 1-10 and col. 5-line 20 to col. 7-line 47).

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of

Art Unit: 2812

the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 7-8, 11, 25, and 27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Varker et al., U.S. Patent 4,683,637 in view of Liu et al., U.S. Patent 6,432,798.

Varker et al. is applied as above but fails to expressly disclose implanting with carbon in order to induce a tensile stress in the first region and a compressive stress in the channel region as well as implanting with a trench etching mask.

Liu et al. discloses implanting carbon using a trench etching mask 104 to form carbon doped regions 110 (see Figures 1-4 and col. 2-line 45 to col. 4-line 56). In view of this disclosure, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the process of Varker et al. so as to implant carbon at the bottom of dielectric walls 16 because this will extend the depth of isolation of the trench. Furthermore, inherently performing this process will result in a tensile stress in a first region and a compressive stress in the channel region.
